

## Fred

Fred's history included being hit by a car (in the past) where he lost part of his tail. He had surgery, had his jaw wired shut, was treated and recovered from that accident. The owner reports Fred is a dog who does not show pain.

### First visit

An assessment indicated Fred would benefit from Trauma Release. Relaxation techniques and essential oils were applied. Trauma release was completed. He accepted the relaxation techniques and responded well to the session.

### Second visit

Assessment indicated vertebral compromise, and a potential source of pain. Relaxation techniques and essential oils were applied, including vertebral release. Tuning forks were used this day. Additional techniques were applied to his previously injured areas (throat/jaw).

Fred responds well to the work.
